

proje çözümleri

Our products...

SHREDDING MACHINES

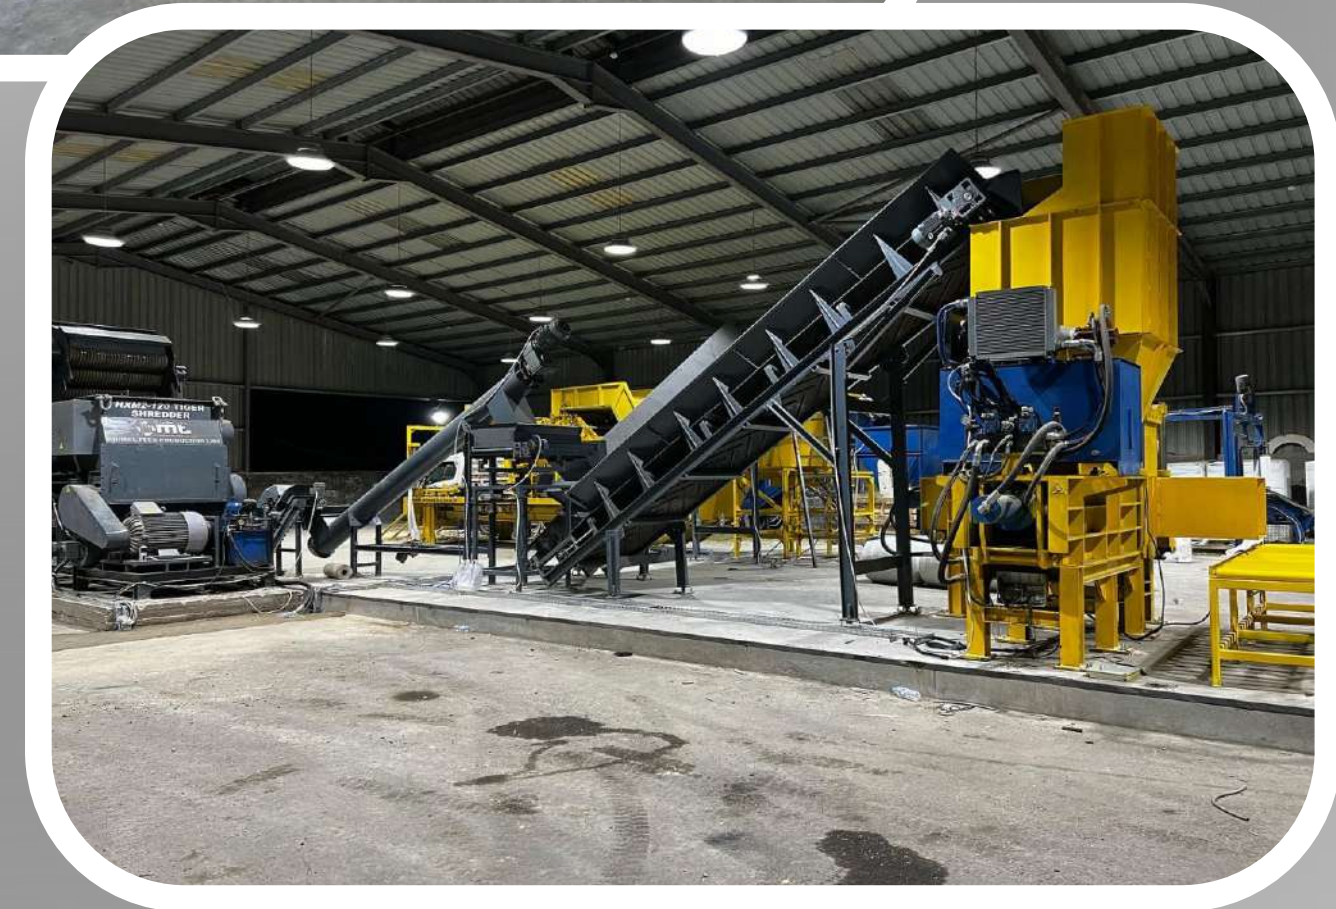

- REDMONSTER SCRAP METAL SHREDDER
- CS DOUBLE SHAFT SOLID WASTE SHURDER
- TS SINGLE SHAFT SOLID WASTE SHURDER
- DS FOUR SHAFT SOLID WASTE SHURDER
- WOOD CHILLING MACHINE
- TREE ROOT SHREDDER
- DATABER HARD DISK DESTRUCTION MACHINE
- PALLET SHREDDER
- COCOA SHREDDER

ANIMAL FEED PRODUCTION LINE

«For the first time in the world, AYGNC shredded palm branches into very small sizes...»

Animal Feed Production Line

Animal Feed Production Line

REDMONSTER CS-180 SCRAP METAL SHREDDER

«Scrap Metal Shredding Machine REDMONSTER»

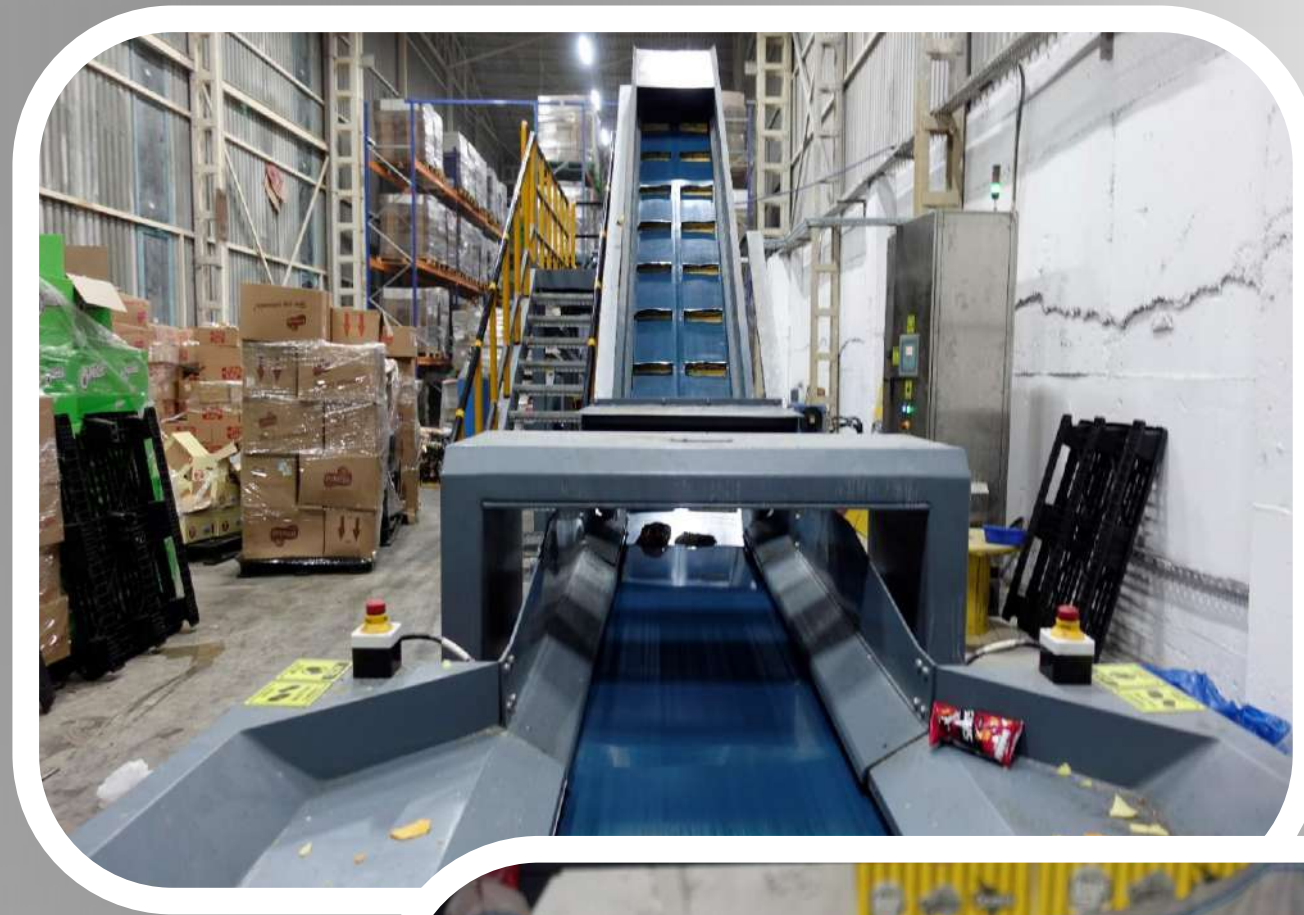

REDMONSTER Scrap Metal Shredder

AUTOMATIC PACKAGE SORTING LINE

«Automatic Package Sorting Line»

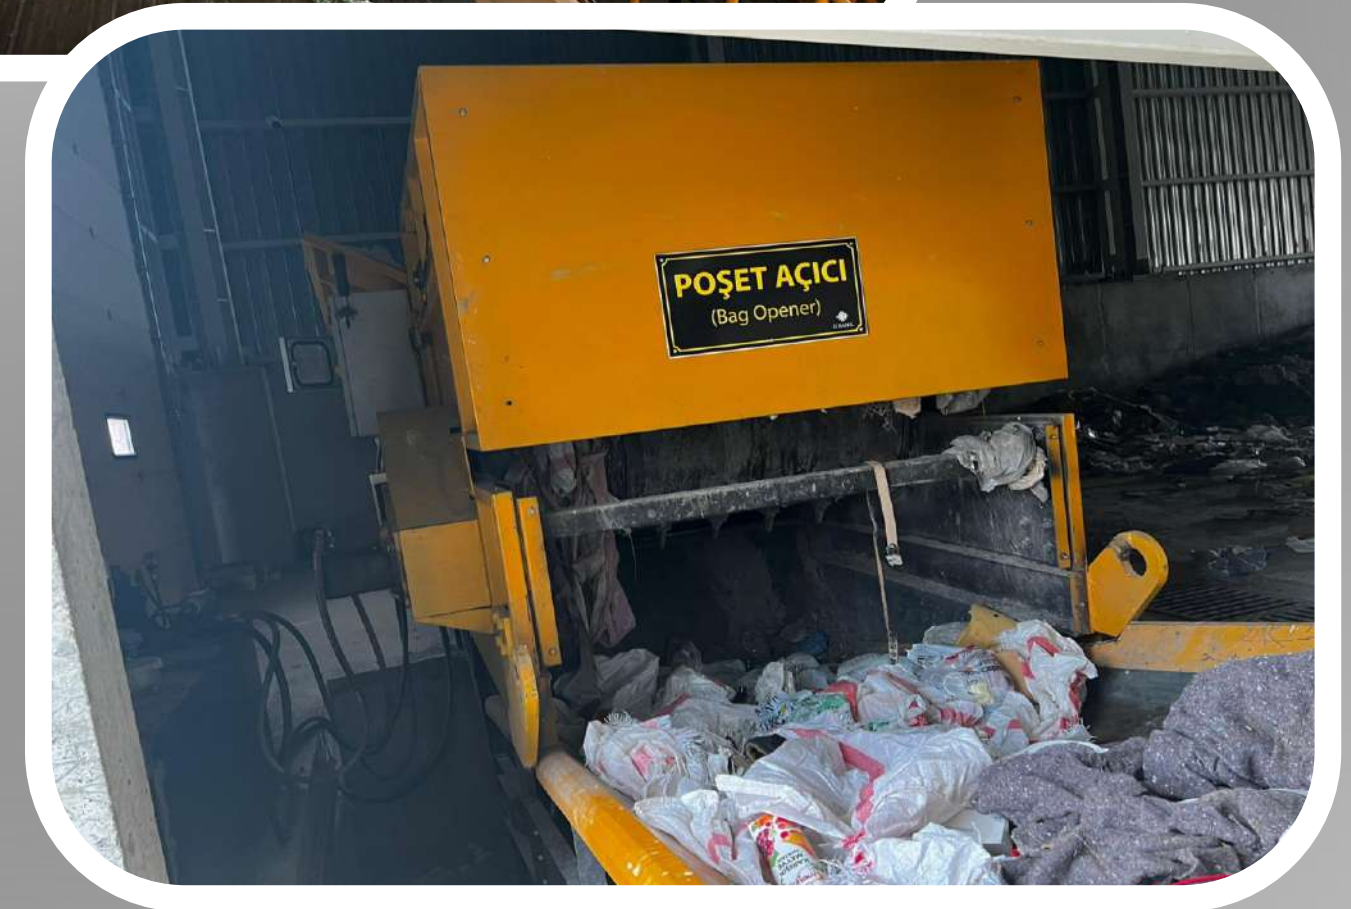

Otomatik Paket Ayırma Hattı

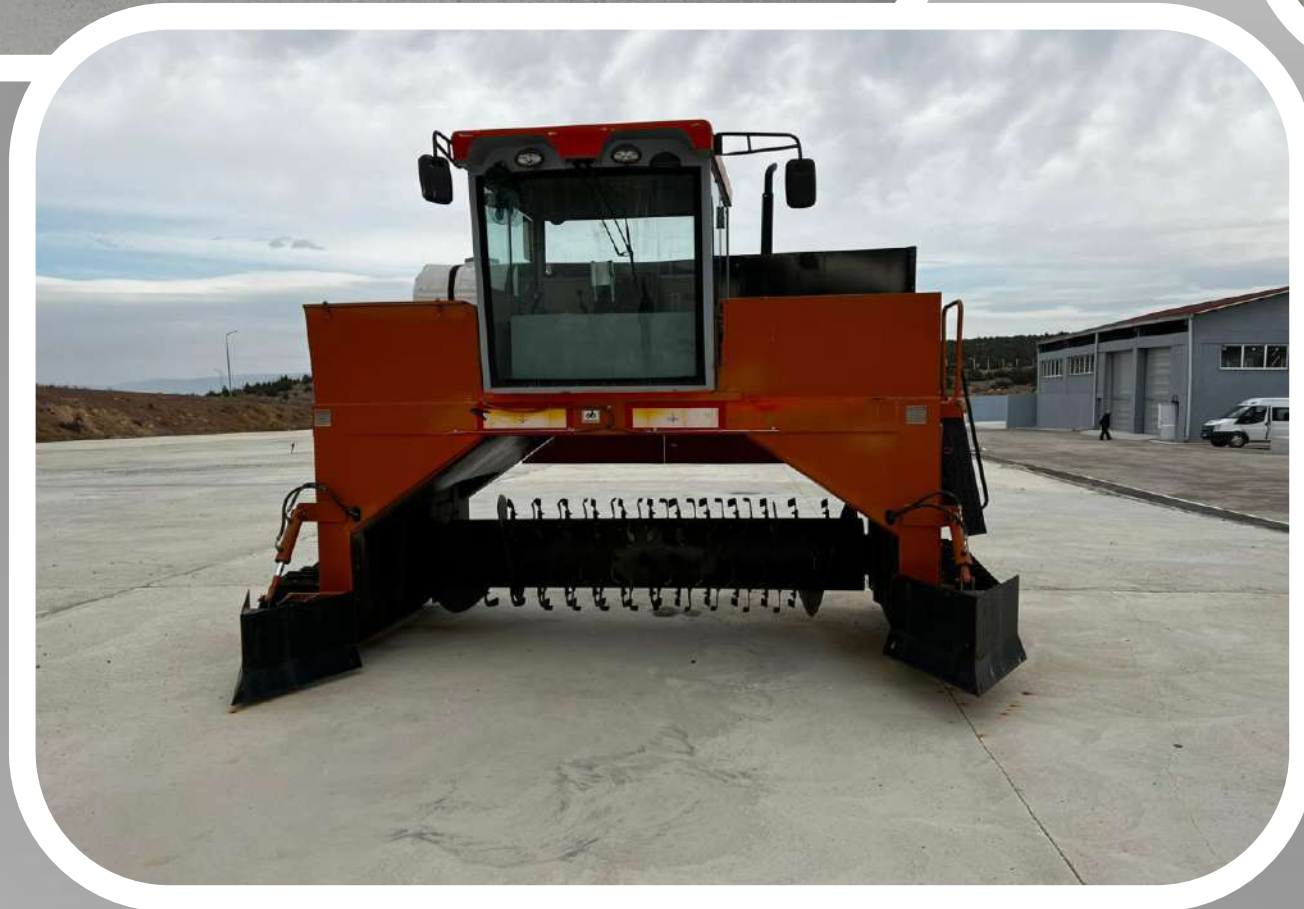

WASTE SORTING FACILITY

«Garbage Sorting Facility»

Garbage Sorting Facility

Garbage Sorting Facility

Garbage Sorting Facility

DATABER HDD MOTHERBOARD DESTRUCTION MACHINE

«HDD Motherboard Destruction Machine»

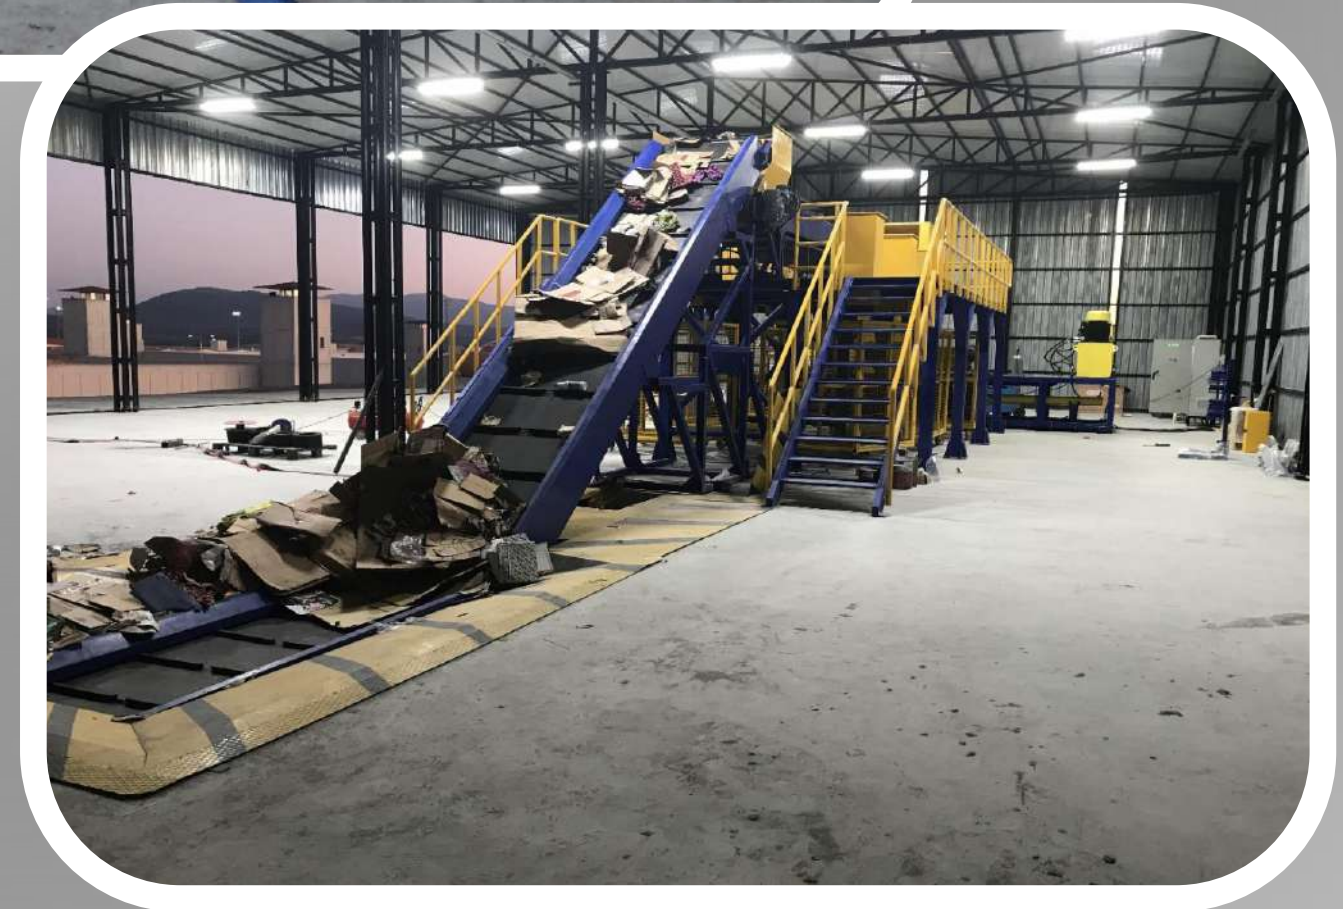

Packaging Waste Separation Plant

«Packaging Waste Separation Facility»

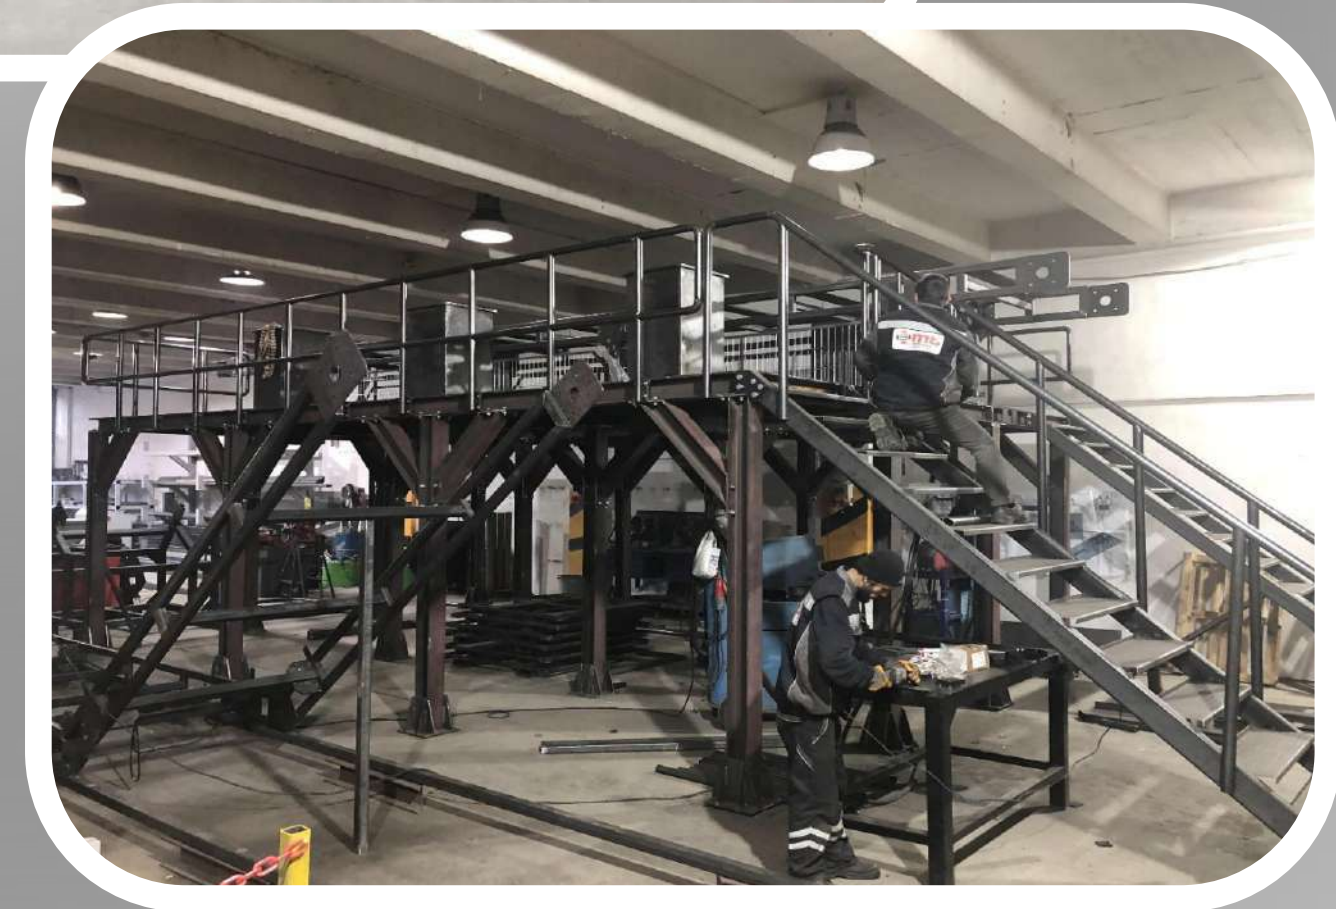

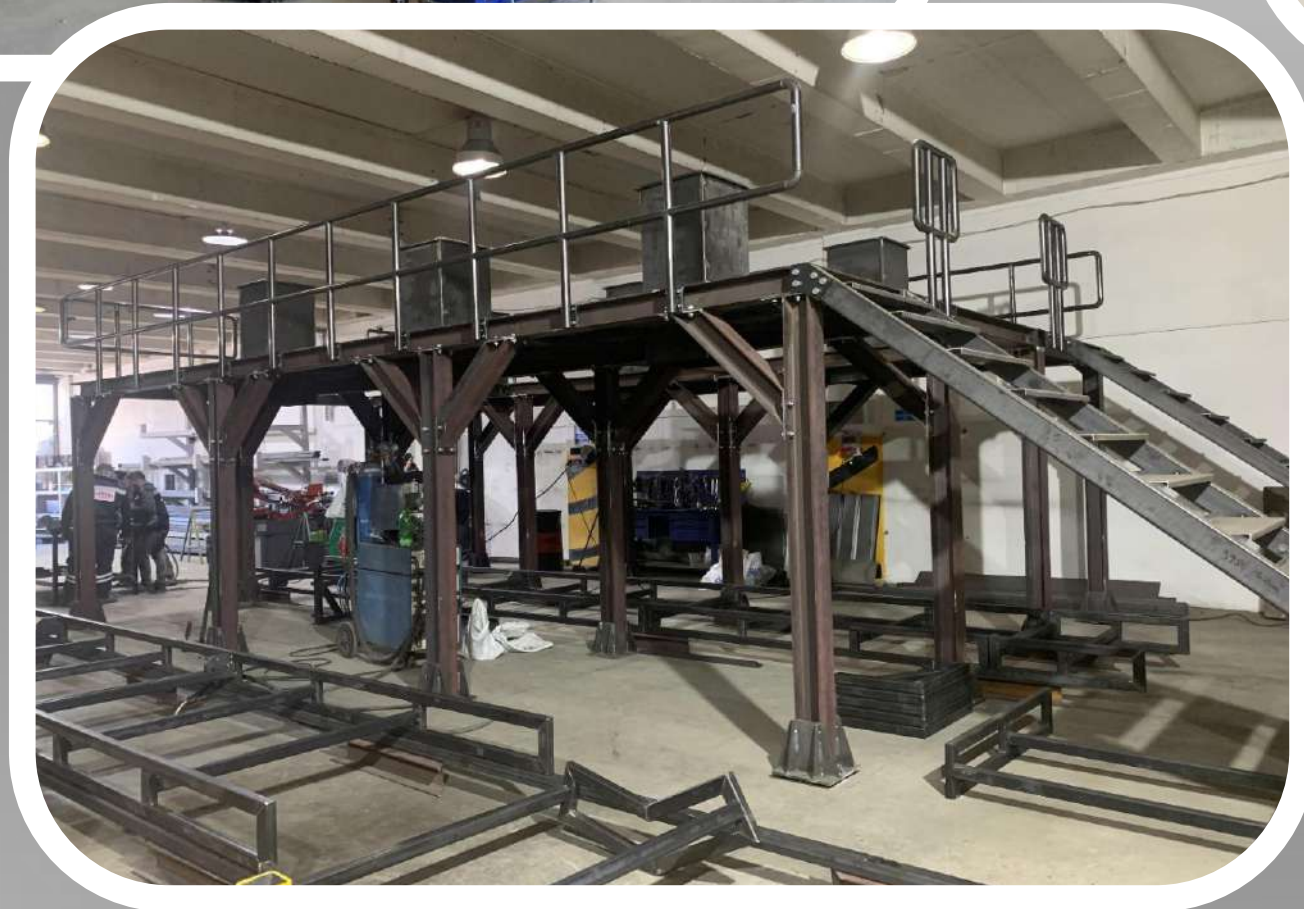

DATABER HDD Motherboard Destruction Machine

Packaging Waste Separation Plant

Packaging Waste Separation Plant

COMPOST FERTILIZER PRODUCTION LINE

«Compost Fertilizer Production Line»

Compost Fertilizer Production Line

Solid Waste Incinerators

Medical Waste Incinerator is used for safe disposal of hospitals, clinics, dentists, laboratory wastes, industrial wastes, urban wastes, infection epidemic solutions, hospital wastes, medical wastes, pathological wastes, biomedical wastes, biohazardous wastes, needle wastes, scalpel wastes. It is used to. Medical waste incinerators are used to eliminate viral epidemics such as coronavirus (COVID-19). The Incinerator eliminates other viruses, including Corona.

It is designed with a double combustion chamber to be used in the disposal of animal waste. Animal waste from various sources needs to be handled with special care. The temperature of our furnace reaches up to 850 C° and completes the combustion process completely. The animal incinerator, designed by our engineers taking human safety into consideration, is produced to be resistant to high temperatures. Animal Incinerator has drying, cooking and curing features and is controlled by PLC control system. Its temperature can be controlled with a thermocouple. Natural gas or fuel oil is optionally used as fuel in the Animal Incinerator. Dangerous particles released during combustion are eliminated by passing through the second combustion chamber. Rapid intervention is carried out in machine service and maintenance. We have incinerator production in different capacities. Efficient technology and energy are especially important for machines that operate continuously. MT technology enables minimum energy consumption and maximum performance.

It is designed with a double combustion chamber to be used in the disposal of garbage waste. The temperature of our furnace reaches up to 1100 C° and completes the combustion process completely. The garbage incinerator, designed by our engineers taking human safety into consideration, is produced to be resistant to high temperatures. The Garbage Incinerator has drying, cooking and curing features and is controlled by a PLC control system. Its temperature can be controlled with a thermocouple. Natural gas or fuel oil is optionally used as fuel in the Municipal Waste Incinerator. Dangerous particles released during combustion are eliminated by passing through the second combustion chamber. Rapid intervention is carried out in machine service and maintenance. We have incinerator production in different capacities. Efficient technology and energy are especially important for machines that operate continuously. MT technology enables minimum energy consumption and maximum performance.
